STIFLE BRACE

The Walkin' Pets Stifle Brace is custom-made to provide the knee support your pet requires while stabilizing the femur and tibia to prevent anterior translation and minimize the stress on the CCL. The metal joints help prevent unwanted axial rotation in the knee joint along with medial/lateral support. This allows the pet to maintain a natural range of motion and gait.

Knee injuries and cruciate tears are the most common injuries in pets. A custom stifle brace stabilizes the knee joint after injury or during surgical recovery. It is possible your pet may need a brace on the other limb to protect against excessive wear while the affected side heals.

Price: \$795

HOCK BRACE

The Custom Tarsal Brace stabilizes a pet's lower back leg at the "heel" and ankle. Each hock orthotic is custom-made to provide the ankle support your pet needs while limiting joint flexion and allowing for a natural range of motion. An orthotic tarsal brace stabilizes a pet's limb while controlling the range of motion and providing pain relief.

Price: \$795

CARPAL BRACE

The Walkin' Pets Custom Carpal Brace stabilizes a pet's lower front leg at the "wrist."

A carpal brace can be used to treat hyperextension of the joint and prevent further deformities while improving stability and reducing pain.

Injuries to these joints can result from either acute trauma or activities that cause a sudden, repetitive sprain to the ligaments surrounding them.

Range of motion joints can be added to allow for motion while stabilizing the affected area.

Price: \$795

ELBOW BRACE

The Walkin' Pets Elbow Brace supports and stabilizes a pet's elbow joint. Each elbow brace is custom-made to provide the elbow support your pet needs while limiting joint flexion and allowing for a natural range of motion. The most common uses are joint laxity or instability, arthritis, and tendon tears.
